DETAILED ACTION***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the plurality of coils are provided to top and bottom points of the first and second coil arrays, respectively, the top and bottom points lie on centerlines of the upper and lower passages, respectively, the coils provided to the first coil array leave a predetermined interval along a flowing direction of air from the other coils provided to the second coil array, respectively, the first coil array leaves a predetermined distance from the second coil array, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified

Art Unit: 3749

and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9, 11, 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: the connection between the cabinet and the drum, the connection between the cabinet and the motor, the connection between the drum and motor, the connection between the cabinet and the heater assembly.

Claim 2, refers to "the first coil array leaves a predetermined distance from the second coil array" which renders the claim indefinite.

Claim 3, refers to "coil array centering on the plate" which renders the claim indefinite.

Claim 11, refers to "the first coil array leaves a predetermined distance from the second coil array" which renders the claim indefinite.

Claim 12, refers to "coil array centering on the plate" which renders the claim indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3749

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Drews et al. Drews et al shows a cabinet (fig. 1); a drum (fig. 1), a motor (fig. 1); and a heater assembly (fig. 1) comprising a heater case having an air passage inside (33, fig. 3); a plate partitioning the air passage into an upper passage and a lower passage (84, fig. 4); and first and second coil arrays independently provided to the air passage to alternately cross the plate between the upper and lower passages (82, fig. 4), the first coil array leaves a predetermined distance from the second coil array (fig. 4), the first coil array is symmetrical to the second coil array centering on the plate (fig. 4), each of the first and second coil arrays is electrically connected in one body (fig. 4).

Allowable Subject Matter

Claims 5-9 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims 14-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to apparatus in general: Zehrbach (2830384), Hoffman (4941270).
